DETAILED ACTION

Election/Restrictions

Applicant's election of Group II, claims 7-12, in the reply filed on 02/09/2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Objections

Claim 8 is objected to because of the following informalities: Claim 8, line 3, "a GPU" should probably be --the GPU--. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 7 is rejected under 35 USC § 103 (a) as being unpatentable over Deming et al. ("Deming") U.S. Patent No. 6,476,816 in view of Evans, US Patent Application Publication No. 2003/0135742.

With regards to claim 7, Deming illustrates in figures 1-15B, particularly figure 2C, (entire document) a substrate for coupling a GPU 208 to a PCB (printed circuit board), the

.....

Application/Control Number: 10/666,085

Art Unit: 2815

substrate having a first interface (208 to card 260) for a connection to the GPU and a second interface (card plugged into slot) for a connection to the PCB 266, the first interface having a customizable attachment footprint for implementing a connection to differing GPU types 314 while maintaining the second interface for the connection to the PCB.

Deming does not show a video BIOS component for providing video BIOS functions, wherein the video BIOS chip is programmed to support a version of the GPU. Evans illustrates in figure 5 a video BIOS component 514 for providing video BIOS functions, wherein the video BIOS chip is programmed to support a version of a GPU 508. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a video BIOS component for providing video BIOS functions, wherein the video BIOS chip is programmed to support a version of the GPU for the advantages given in Evans paragraphs 8-14.

Claim 8 is rejected under 35 USC § 103 (a) as being unpatentable over Deming and Evans as applied to claim 7 above, and further in view of Jackson, U.S. Patent No. 6,285,081.

With regards to claim 8, Deming and Evans are discussed above, they do not show the customizable attachment footprint of the first interface includes a plurality of ground balls configured to support high-speed signaling of the GPU. Jackson illustrates in figures 1A and 1B a customizable attachment footprint of a first interface includes a plurality of balls 125 configured to support high-speed signaling of a GPU 115 (col. 5, lines 35-45). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a plurality of balls for the improvements disclosed in Jackson col. 2, line 7 to col. 4, line 51. Note: Claim 8, line 2, "ground" is a function.

Application/Control Number: 10/666,085

Art Unit: 2815

Allowable Subject Matter

Claims 9-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from an examiner should be directed to Primary Examiner Allan Wilson whose telephone number is (571) 272-1738. Examiner Wilson can normally be reached 7:00-4:00 Monday-Thursday and 6:00-3:00 on Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on (571) 272-1664. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
